

**SAFE, SMART, PREPARATION and
DELIVERY OF DIAGNOSTIC AND
THERAPEUTIC RADIOPHARMACEUTICALS**

How to prepare & administer radiopharmaceuticals?

Radiopharmaceuticals in diagnostics and therapeutic nuclear medicine applications set additional challenges.

Radiation
safety

Time sensitive
logistics

Complex
manipulations

Examples

1. Preparation ~24 steps of variable parameters

- potential sources of errors or contamination,
- dose exposure due to the number of transfers,
- careful process and dose adjustments required,
- complex preparation and handling despite good therapeutic outcome.

2. Dose patient dependent kg mass & platelets count

Our solution

EVEON offers custom devices for **automated preparation and delivery** device with major benefits.

+

Modular

+

Safe

+

Simple

Intuity® Mix Pro safe and smart solution for radiopharmaceuticals preparation and delivery

Examples

Diagnostic
Automated
radiosynthesis

Immuno-radiotherapy
Device for elution of
target radionuclides

Curietherapy
Intratumoral injection
delivery device

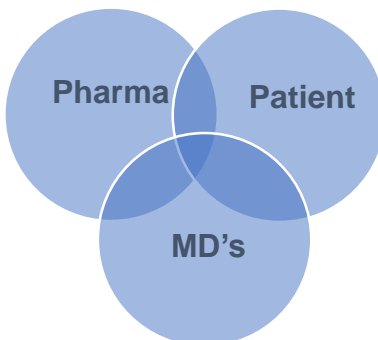

Some of our partners

PMB
ALCEN

Value proposition

- Simple logistics
- Faster time-to-market
- Development tool
- Modularity

- Personalized treatment
- Time saving
- Reduced dosing errors
- Easier access to treatment

- Very precise dosage
- Reduce HCP exposure
- Smart: RFID, drug recognition, user ID data sharing via GSM...
- Reduced steps

EVEON

 2009 incorporation	 100% focused on medical devices design, development and manufacturing	 HQ in France (Grenoble) Office in US (Boston)	 ~30 Employees 50% dedicated to R&D
 Recognized partners    	 Intuity® technology platform 13 patent families	 Strong internal skills Microfluidics, Software, Electronics, Mechanics, Automation, Industrialization	 Strong Quality Management ISO 13485 IEC 62304
