

**Eveon awarded 1st prize  
in the international competition  
*Inventer Demain (Invent Tomorrow)***

**GRENOBLE, France – December 3, 2014 - EVEON, designer and manufacturer of medical devices used in the preparation and/or administration of medication, was awarded the 1st prize Monday evening in the *Inventer Demain* competition after winning the vote of an expert jury and the audience.**

Jointly organised by France 3 and RTS (Radio Télévision Suisse), this competition brought together 60 pre-selected companies. 12 finalists were chosen to present their inventions before a jury on December 1st during a special episode of the television show *Toutes Taxes Comprises* on RTS channel 1.

Both the jury and audience were impressed by the technology EVEON used to address important current concerns in the health system, such as: in-home patient care; safe, precise, and easy to use injections; improved patient follow-up care; etc. EVEON presented its medical device for automated injection preparation and delivery, which mixes powder and solvent, delivers the correct dose of medication, at the correct speed, all without handling of the needle.

"This superb reward will allow us to increase our international visibility and is a great acknowledgment of the work our teams have accomplished over nearly 6 years now." said Vincent Tempelaere, Eveon's CEO. He also thanked everyone who voted for EVEON and who relayed information.
